

VENKATESH VALABOJU

Front-End Developer | Oracle SOA

 +91 6303260542  [email](#)  [linkedin](#)  [github](#)

Technical Skills

Front End Development: ReactJS, NextJS, JavaScript, TypeScript, Redux, Tailwind CSS

Back End Development: NodeJS, ExpressJS

Database and Version Control: SQL, Github

Languages: Python, JavaScript

Other Technologies: Oracle SOA suite

Education

Indian Institute of Space Science and Technology

2018 – 2022

Bachelor of Technology in Electronics and Communications Engineering

Thiruvananthapuram, Kerala

Experience

Accenture | *Associate Software Developer*

May 2024 - Present

- Developed and managed enterprise integrations using Oracle SOA Suite, leveraging components such as BPEL, Mediator, and Human Task for seamless process automation.
- Designed XML schemas and utilized XSLT for robust data transformation across complex workflows.
- Integrated business logic using Business Rule to enable dynamic decision-making within automated processes.
- Enhanced database interactions with optimized SQL queries and seamless integration into SOA composite applications.
- Built and deployed human-centric workflows, improving task management and collaboration.

Appt Software Technologies | *Front-end Developer*

Jan 2024 - May 2024

Company Website |  [appt.dev](#)

- Took full ownership of designing and developing the company's public website, ensuring a modern and user-friendly interface.
- Utilized NextJS, TypeScript, Tailwind CSS, and Shadcn to build a responsive and dynamic web experience.
- Enhanced website performance by implementing SEO-friendly practices for improved search engine visibility.
- Delivered reusable and scalable components to support the website's long-term maintenance and updates.

Company Platform

- Contributed to the development of the company's Low-Code Platform, collaborating closely with the product and design teams.
- Built core platform features using ReactJS, Redux Toolkit, Redux Sagas, Axios, Tailwind CSS, and Shadcn, ensuring efficient state management and robust API integrations.

- Designed and implemented the login functionality using Keycloak, enabling secure and scalable authentication for the platform.
- Developed the Infrastructure Builder module using React Flow, providing users with a drag-and-drop interface for streamlined configuration.
- Optimized application performance through effective debugging, code reviews, and refactoring of critical modules.
- Ensured cross-browser compatibility and responsive designs, improving user experience across various devices and platforms.
- Collaborated with cross-functional teams to implement key features and ensure the platform met project requirements effectively.

Projects

Nxt Trendz (E-Commerce) | *React Js, REST API, Context API, JWT Token* December 2023

- Created a modern e-commerce experience with a design inspired by Amazon and Flipkart focused mainly on front end.
- Implemented pages for Login, Products, and Product details with React Router, React components, and form inputs.
- Secured user data with JWT tokens, REST API calls, and local storage.
-  [Repository Link](#) |  [Deployed Link](#) | Login Details: Username: rahul, Password: rahul@2021

Jobby App | *React Js, REST API, JSON, Routing, Context API, JWT Token* October 2023

- Created pages for Login, Home, Jobs, and Job item details with React components, form inputs, and event handlers.
- Secured user information with JWT tokens, REST API calls, and local storage.
- Utilized React Router for protected routes and persisted login state. Technologies used: React JS, JS, CSS, Bootstrap, Routing, REST API Calls, Local Storage, JWT Token, Authorization, Authentication
-  [Repository Link](#) |  [Deployed Link](#) | Login Details: Username: rahul, Password: rahul@2021

Emoji Game | *React, js, CSS, BootStrap* September 2023

- Developed responsive Emoji memory game where users can win it by clicking unique emoji each time till all displayed emojis are clicked. All emojis positions will be randomized after each click.
- List of Emojis is displayed by using React components, props, lists, conditional rendering, styled using CSS and randomized emojis placed using event listeners by updating react state.
- Updated different game states such as emojis list, winning state and losing state by using game state variable and conditional rendering
-  [Repository Link](#) |  [Deployed Link](#) | Rules: To win, don't click the same emoji twice.

Tic-Tac-Toe Game with Minimax AI | *Python, Minimax Algorithm* October 2023

- This Python-based Tic-Tac-Toe project features a challenging AI opponent powered by the Minimax algorithm.
- It allows two players to take turns, one being the user and the other the computer artificial intelligence.
- The game logic checks for wins and draws.
